In 2023, OpenAI briefly discontinued Codex's API access, prompting backlash from researchers, which led to reinstatement for academic use (

## Source 3 (Score: 0.89)

On March 23rd, 2023, OpenAI made an announcement that they will be discontinuing support for the Code. The API was initially introduced as a free limited beta in 2021, and it has maintained that status to date. However, with the advancements of OpenAI's newest GPT-3.5 models for coding tasks, they will no longer b supporting Codex and encourage all customers to transition to GPT-3.5

## Source 4 (Score: 0.82)

The discontinuation of Codex poses a problem for scientists who will soon be unable to reconstruct Codex-based research. The US company responds that the Codex framework has been clearly communicated from beginning.

"To be clear, Codex was free and in a limited beta, with heavy rate limits from the get go," said OpenAI spokesperson Logan Kilpatrick. "I will try to get a glossary added to the docs soon that explain the different terms but Codex!= our actual widely available models." [...] However, OpenAI will discontinue the model or March 23, even before Codex leaves beta. The short notice for this announcement makes some users unhap Since the code and the model are not publicly available, this eliminates any possibility of using Codex at all After all, the model cannot simply be downloaded and run on one's own machine. [...] THE DECODER
